2-5 TONS | PACKAGED AIR COOLED

Compact Footprint to Allow Efficient Use of Floor Space

SERIES 6

HEAD PRESSURE CONTROL

Head pressure is maintained at the ideal level through the use of a VFD and pressure transducer by varying the fan speed in all ambient conditions from -35°F to 105°F.

PACKAGED SYSTEM

The unit is completely piped, wired and charged at the factory, eliminating any of this work from having to be performed on site.

The packaged air cooled condenser is available with all the options and features of the standard Series 6 unit.

DIRECT DRIVE CONDENSER FANS

Condenser fans are backward inclined and direct drive for maintenance free dependability.

The unit can be positioned against an outside wall for intake and discharge of condenser air through a grill.
